

**ARC A Engineering Solutions Ltd.:**  
**“SEE Electrical is both powerful and easy to use.”**

ARC A Engineering Solutions Ltd. is a company working in the field of Electrical design engineering (installation, programming, safety systems integration ...) which operates in the UK and the rest of Europe.

The company chose SEE Electrical for its ease of use, the wide range of functionalities offered and the ability to expand functions. Moreover, the technical support and ease of access to that support was a key point for Arc A Engineering Solutions.

IGE+XAO's Electrical CAD software is used for the production of new electrical designs, and to upgrade the existing drawings in PDF, DWG/DXF and paper formats.

According to Richard Kear, Director of Arc A Engineering Solutions, SEE Electrical is both powerful and easy to use. It can be used as a basic package to make minor modifications to existing drawings by personal maintenance, even if produced with another package, but also as a full blown package to produce a full set of comprehensive drawings for a panel builder to produce to.

“Putting the quality of the product to one side, the level of support provided by the UK is outstanding. Being a contractor, I have tight deadlines and work some unusual hours, nevertheless, the UK office has never failed to support me when I have needed assistance. IGE+XAO Ltd's manager has depth knowledge of the product and provides us excellent service. In times when he struggled, he arranged a call from the service centre in France who is also excellent (top level of technical support on this product...second to none). The product needs no selling, just download the demo and ask M. Avezard for a couple of videos showing you some features and you'll be sold. From a price point, it is cheaper than some of its German competitors but loses none of its functionalities. Great product!”
